

International Association of Great Lakes Research

53rd Annual Conference

Toronto, Ontario

May 17th to 21st, 2010

Call for Abstract Submissions to Session 25

Lake Winnipeg: Causes and Effects of Eutrophication

Chaired by: Greg McCullough and Hedy Kling

Papers in this session will highlight our current understanding of eutrophication in Lake Winnipeg and processes in the watershed that have forced increased productivity in the lake. The goal of session organizers is to draw together scientists from both the lake and watershed to enhance mutual knowledge of causes and effects relating to eutrophication of the lake, and that will help to guide future research and solutions. We invite papers ranging from presentation of research results to discussions of management

Abstracts are due by January 15th, 2010

Submit abstracts through the conference link at
<<http://www.iaglr.org/conference/callpapers.php>>
